

Avengers

OPC Complex

Code: 109
Package Size: 60 caplets
Suggested Use: 6-10 caplets per day in a divided dose, for 6-10 days.
 Maintain with 2-4 per day in a divided dose.

The Most Potent Antioxidant to Date
On Its Way To Vital Tissues Within 20 Minutes!

What are OPC's and Pycnogenols?

OPC is the abbreviated name commonly used for Oligomeric Proanthocyanidins. Pycnogenol is a registered trade name (in the USA) of Horphag Research Limited, a producer of OPC's from pine bark.

Note: In 1979, Professor Jacque Masquelier coined the word Pycnogenols, to designate a special group of bioflavonoids: the bioflavanols. Pycnogenol means: that which creates condensation. The word refers to the natural and spontaneous way in which the flavan-3-ol molecule forms its oligo and polymers. It was Masquelier's intention that this name would be used as a generic name for the totality of extract, as it is obtained by means of the use of his many extraction patents. However, Professor Masquelier has not been able to maintain control over the name he invented. Pycnogenols (or Pycnogenol) has become a trademark, deposited and registered in many countries by many different companies. Only in France does Professor Masquelier control the use of this trademark.

In all other countries, Masquelier lost control over the use of the word of which he is the undisputed author: *Pycnogenols*. Ref. *OPC in Practice: by Bert Schwitters in collaboration with professor Jacque Masquelier*.

OPC's are in many plants, however, at present the best source of OPC's are from Grape Seed and Maritime Pinetree bark. Professor Jacque Masquelier, the original patent holder for extraction procedures for both sources, endorses the Grape Seed, not the Pine Bark. In addition, only OPC's extracted from Grape Seed are approved in France and commonly called Pycnogenols.

Why Avengers?

If we want maximum health and well-being, a growing number of experts claim that we need additional antioxidants to support our body's natural fighting powers against free radicals. Although almost 50 different nutrients contain antioxidants, very few people ingest enough of them to achieve sufficient protection from free radical activity. Unfortunately, most people eat the wrong kinds of food and modern processing methods may destroy or reduce the beneficial properties of the healthy foods we do eat. Even if we ate the right, unprocessed foods, we would probably have to eat enormous quantities of them to get the added antioxidant benefit. But now we have AVENGERS!

Recent studies confirm that OPC's are 50 times stronger than Vitamin E and 20 times stronger than Vitamin C as an antioxidant. In addition, OPC's are an active transporter of Vitamin C, carrying this vitamin to the site of action. Another important advantage is that OPC's stay in the body for approximately 72 hours, whereas Vitamin C only remains in the blood stream for three to four hours.

For purposes of education, it is important to note that the discovery of OPC's may provide a new and very potent supplement that appears to overcome damaging free radicals. Free radicals, including peroxides, are by-products formed in our bodies when molecules of fat react with oxygen. Extensive studies show that free radicals can also develop in the body due to exposure to toxic chemicals in the air, food, and water. They are also formed by the body's normal chemical processes, including metabolism of polyunsaturated fats. Free radicals can be very harmful to the cells of the body. Some scientists believe that free radicals are the common denominator of all disease.

Testimony

Howard McMillan from OK writes:

"I have been diagnosed with a very serious asthma problem. I have not had a good quality of life for the past four years. I have been taking a lot of medicines just to be able to breathe. I started taking Avengers (OPC Complex), and I am now so relieved that I am breathing without wheezing and gasping for breath. I can breathe deeply and I am sleeping good again. I was becoming addicted to some of the bronchial inhalers but now I do not need them. Another blessing, that is noticeable, is my skin. The steroids that I have been taking make my skin feel and look brittle. Since taking Avengers my skin has a healthy pliable look and feel.

Thank You for Avengers."

Ingredients

Each two tablets contain:

Soy Sprout Vegetable Complex	200 mg *	**
OPC's and Leucocyanadins	50 mg *	**
Grape Skin Extract (Polyphenol)	20 mg *	**
Ginko Biloba 24% Extract	10 mg *	**
Milk Thistle 80% Extract	10 mg *	**
Green Tea Extract, Caffeine Free	10 mg *	**
Hawthorn Berry Extract	10 mg *	**
Vitamin C (Ascorbic Acid)	50 mg	.166%	*
Vitamin E	20 IU	.200%	*
Zinc	30 mg	.200%	*
Selenium	50 mcg	.71%	

*United States Recommended Daily Allowance for adults

** No USRDA has been established

OPC GRAPE SEED 92+% EXTRACT - provides high levels of the polyphenol Proanthocyanidin shown to be dozens of times more powerful as an antioxidant than Vitamins E and C. Shown to be effective in the prevention and treatment of all types of cardiovascular and connective tissue conditions.

SOY SPROUT COMPLEX - provides unique free radical protection by nutritionally supporting the "first-line-of-defense", the antioxidant enzyme system, including Super Oxide Dismutase (SOD), glutathione peroxidase and catalase. Antioxidant enzymes are produced by the body and provide unsurpassed free radical protection. Live food soy sprout complex has been shown to provide powerful anti-inflammatory properties - especially for arthritic conditions.

MILK THISTLE 80% EXTRACT - provides high levels of the phyto-nutrient silymarin, which is a major antioxidant, especially for the liver. Used extensively in Europe as a regenerative and protective tonic for all types of liver conditions including cirrhosis.

GINKGO BILOBA 24% EXTRACT - made from the leaves of the world's oldest living tree, providing powerful antioxidant compounds called ginkgosides. Shown to improve circulation, especially to the extremities including the brain, thus helping to reduce memory loss, and as a natural preventative treatment for Alzheimer's.

GREEN TEA 80% EXTRACT - provides high levels of the polyphenol Catechin. Catechins are similar in molecular content and function to the Proanthocyanidins found in OPC Grape Seed Extract which have been shown to be dozens of times more powerful as an antioxidant than Vitamins E and C. Catechins demonstrate a more general and overall level of protection than proanthocyanidins and other polyphenols.

HAWTHORN BERRY EXTRACT - provides high levels of the polyphenol procyanidin. Hawthorn is historically considered to be a powerful tonic for the heart and aorta, and modern testing has linked much of Hawthorn's effect to protecting the heart from free radicals.

Nutritional Makeup

Free radicals come in many shapes and sizes, as well as from a variety of sources including air and water pollution, radiation, pesticides, and pharmaceutical and recreational drugs - even normal cellular metabolism. Scientists and doctors worldwide agree that loss of cellular integrity due to free radical damage is the leading factor in the genesis of every known degenerative condition of our time. Simply put, no other nutritional support category is more important for short-term recovery of long-term health and well-being than antioxidant nutrition.

Fortunately, nature has provided us with many types of free radical fighting nutrients known as antioxidants. AVENGERS (OPC complex) is a combination of some of the most powerful whole food and herbal antioxidants available to provide a complete spectrum of free radical protection that cannot be provided by any single antioxidant substance.

Protect Your Family From Free Radicals

Free radicals have been linked to diseases like Aids and Cancer, wrinkling of the skin, and premature aging - conditions which adversely affect everyone in our society in one way or another. Protection against free radicals is provided by antioxidants such as vitamins C and E, and potent "SUPER FOODS" like selenium and garlic. To date, one the most potent antioxidants known are Proanthocyanidins (OPC's).

OPC's, as a free radical scavenger is 20 times more powerful than Vitamin C and 50 times more powerful than Vitamin E

Avengers (OPC Complex) is an advanced antioxidant formula, an exclusive blend of enzyme-active and phyto-nutrient rich whole food and herbal antioxidant concentrates. Only the highest quality ingredients are utilized to ensure optimum absorption and biological activity.

What are the best sources for OPC's?

Important facts from the scientist who discovered the compound, Professor Jacques Masquelier and the European processors who produce it:

- ◆ The most potent Proanthocyanidins are produced from Grape Seed. It is 92% to 95% strength, from white or red grapes.
- ◆ The same compound extracted from Maritime Pine Bark is weaker. It is 82% to 85% strength.
- ◆ All Proanthocyanidins produced under Professor Masquelier's patent, use the same extraction processes as described in the patent.

"OPC from Grape Seed have an advantage over OPC from Pine Bark"

- Professor Jacques Masquelier

Questions frequently asked

(Q) What are OPC's?

(A) OPC's are the most powerful scavenger of oxygen-free radicals available to the public. They are not a drug: they have no side effects; they may be safely taken in small or large doses.

(Q) What are free radicals?

(A) Free radicals are highly toxic oxygen molecules produced by enzymatic oxidation. They are normally inactivated by a family of enzymes present in the aerobic cells called super oxide dismutase (SOD). Free radicals can attack, damage, and ultimately destroy any material. The rusting of metals, the browning of a fresh cut apple, and the hardening of paint are common examples, not just sensitive cells and tissues inside or outside the body. In our bodies, free radicals can degrade collagen, reprogram DNA, and are implicated in more than 60 diseases.
